

Scenario

You are a college student with a major in pre-medicine. You have a very busy schedule and are constantly studying in your dorm room, and finding it hard to make time to eat. The long lunch room lines and the walk make you constantly avoid going.

Task 1:

Click Chick-fil-a to eat from the Russel campus dining hall.

Task 2:

Order a large lemonade under “drinks” and a 8 piece nugget under “food”

Task 3:

Select your dorm residence hall as east quad and wait for your food to be delivered upon the app status of the driver.

Notes:

What changes should I make to my application?

- need to create a back button so the user can order multiple things or change their order.
- create a map in order to track food drivers location
- create an option to pick up food

What should I keep the same?

- the more button while searching for food
- the option of all the different food types you can get so it's not so unsorted.
- the payment procedure where you are able to pick how you want to pay
